

ArchLynk

ArchLynk Supply Chain Portal

ArchLynk Supply Chain Portal is an interactive portal and collaboration platform providing a single entry point for key players in the supply chain. Role-based access allows shippers, carriers, and customer service reps to efficiently manage orders and shipment execution with the help of cutting-edge analytics.

1 Platform catering to versatile supply chain needs | **4** Personas – Shipper, Carrier, Supplier & Customer | **90** Projected reduction in extraneous interactions

The ArchLynk Supply Chain Portal is built using SAP Cloud Platform Portal integrated with SAP Cloud solutions, powered by SAP S/4HANA, and customized with third-party applications.

Enhanced Collaboration with the ArchLynk Supply Chain Portal

Challenge	ArchLynk Supply Chain Portal
Lack of Visibility for Inbound Operations	Order Board for real-time visibility of product type, quantity and time windows
Lack of Communication	Integrated & precise communication among stakeholders for specific transactions
Inefficient Transportation Planning	Responsive Planning - Synced and iterative planning with the supplier to reach the global optimum
Lack of Tracking Visibility	Pro-active Decision Making - real-time tracking and full visibility of supply chain from the source location
Rating User Performance	Challenge KPIs to improve and make data driven decisions
