

ARCHLYNK

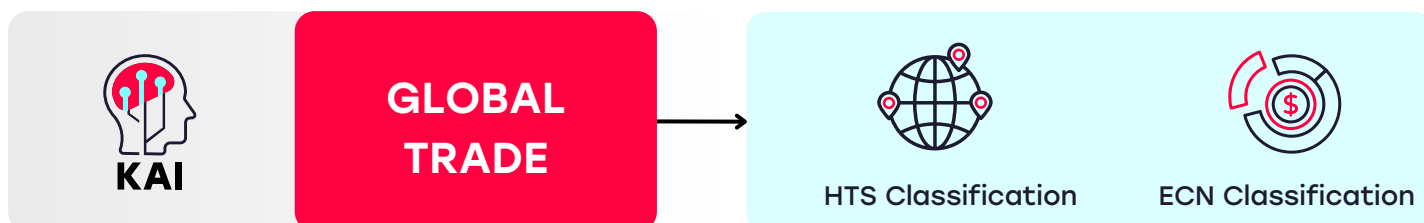

KAI PRODUCT CLASSIFICATION

KAI is an AI-enabled cloud-based SaaS solution designed to automate and audit product classification using historical and real-time data using AI and ML. KAI seamlessly integrates with your existing global trade management software. Using supervised machine learning, KAI can utilize historical and current data to adapt and learn continuously, reducing human errors, inefficiencies, and costs.

Hyper automate your Global Trade and Supply Chain with advanced AI & ML Technologies.

Product Classification can be an expensive and time-consuming manual exercise with the risk of losing years of classification knowledge for heavy dependency on people to execute critical classification activities. Furthermore, error-prone processes and penalties from misclassified products can cost a business dearly.

Leverage the unmatched power of AI and ML to eliminate product classification complexities. KAI integrates with your existing global trade software to allow classification predictions. It can classify products globally for HTS or ECN and identify inconsistencies to perform a health check on your historically classified products.

KAI leverages your historical classification data to create a more streamlined, efficient, and cost-effective solution for your product classification challenges. KAI for Product Classification is delivered in three components: (add some visual elements with this text)

- A pipeline for creating supervised Machine Learning models from your existing classification data
- A server to automatically process new products through the model
- Generate a classification prediction and a workflow to review classification predictions and save them to your master data.

Key Features

- KAI for Product Classification can seamlessly integrate with SAP GTS to manage product classification
- Users can also leverage the Standalone KAI Web App to classify products irrespective of the global trade management solution
- Open API allows seamless integration with non-SAP and external systems
- The health-check functionality identifies inconsistencies in a customer's existing classification

Benefits

Eliminate complexity in classification process using AI & ML

KAI's proven and matured AI algorithms shows above 90% accuracy in less than 6 months

Reduce up to 75% of your Global Trade Manual Product Classification

Reduce up to 75% of your Global Trade Manual Product Classification

Save an Average \$150k in Reclassification Fees

Avoid Penalties of up to \$1M for Violations of Trade Compliance

Automate your classification decisions for high confidence predictions or let KAI be the starting point for your classification process.

About ArchLynk

- Originally founded in 2008
- Leaders in SAP Digital Logistics (TM, EWM, YL, etc.), SAP Global Trade Services (GTS), Supply Chain Management (IBP, etc.), & Business Network for Logistics (FC, GTT, MT, etc.) implementations
- Specialized Innovations: AI /ML, Integrations, Accelerators, Custom Solution Development
- Global Service Delivery Capability with presence in NA, Europe, Australia, China & India

Why ArchLynk

- Best-in-Class Consulting Company with specialized expertise in Supply Chain and Global Trade
- Flexible, Adaptable, & Innovative
- Custom Solutions, Integrations, Migrations, and Interfaces
- Global Reach with Experts and Offices Worldwide

200+ Successful implementations of all SAP based TMS modules

1st Company to implement SAP TM within 12 Weeks

1st to implement a global Visibility Control Tower with SAP GTT

Preferred Partner with project44
